

Printing from a Smart Phone Using Wifi

Android

Google Cloud Print comes preinstalled on most Android devices, but you can download it manually.

1. Make sure you are logged into the Wifi network. The name is: Millinocket Memorial Library, and the password is: mmlwifi2019
2. If you download the Google Cloud Print app to your mobile device manually, you'll have to identify or add the printer. Open Settings and find Printing to add a printer. Our printer is called "XRX WC 6655"
3. Once your printer is added, open the app you're printing from and tap the three dots that indicate more options (usually in the upper right corner) to find and select Print

Apple iOS

Apple's built-in AirPrint feature makes it easy to print directly from any iPhone or iPad without downloading additional programs to your mobile device.

1. Make sure you are logged into the Wifi network. The name is: Millinocket Memorial Library, and the password is: mmlwifi2019
2. Next, open the app you want to print from and find the print option, which may be under Share, Print or Other Options. Tap Print or the printer icon and select Choose a Printer. Our printer is called "XRX WC 6655"
3. You should be able to easily identify and select the printer of your choice (or add a new printer), specify your printing needs (number of copies, etc.), and send your job to the chosen printer.
